Dear Elvin Calata,

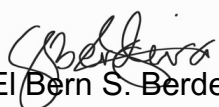

As a BS Information Technology graduate from Saint Joseph Institute of Technology, I am writing to offer my hands-on expertise in full-stack web development, UX/UI design, and IT support to your organization.

During my internships at the DICT Regional Office and AFTECH IT Solution, I built functional web portals using Laravel and Django, and wrote Python scripts for network automation. My core stack includes HTML, CSS, Node.js, Java, and PHP, complemented by design skills in Adobe Photoshop and Illustrator.

Beyond my internships, I have developed complex, standalone systems, including an agricultural forecasting model, a Django-integrated smart home monitoring application utilizing ESP32 microcontrollers, and a functional web-based inventory management system. I take pride in delivering clean code alongside visually engaging, user-friendly interfaces.

I am a motivated problem-solver ready to bring my adaptable skill set to your team. My attached resume details my experience and project history. Thank you for your time, and I look forward to discussing how I can add value to your company.

Sincerely,

El Bern S. Berdera
